Fiscal Affairs Dept.,2019-10-31 This Technical Assistance paper assesses Slovak Republic s public investment management framework using the IMF s Public Investment Management Assessment PIMA methodology and advises the authorities on options to strengthen further the management of public investment State owned enterprises are major investors in infrastructure but are subject to little central oversight of their operational or financial performance The report makes seven recommendations aimed at strengthening PIM institutions and reducing the identified efficiency gap These recommendations focus on key bottlenecks and challenges in the investment process Issues that warrant the authorities primary attention include

introducing a strategic planning framework for public investment developing a fully operational pipeline of major projects based on clear and robust selection criteria and improving the credibility of the annual budget and medium term budget ceilings It also recommends establishing a national strategy and norms for routine and capital maintenance budgeting that will enhance the quality of strategic existing infrastructure *Library of Congress Subject Headings* Library of Congress,2004

Casas,F. Wayne Klaiber,Antonio R. Mari,1996 Corrosion and Protection of Materials Marina Cabrini,2021-04-06 This book contains thirty articles on various topics related to the corrosion and protection of metallic materials This topic is of strong actuality both due to the aging of plants and infrastructures that require checks and maintenance and to the use of traditional materials in increasingly aggressive environments added to the need of changing the current anti corrosion systems with less environmental impact methods Finally the new development of innovative materials such as additive manufacturing or high entropy alloys needs the characterization of their corrosion behavior In this issue there are works on new alloys obtained for additive manufacturing or high entropy on the study of corrosion and stress corrosion cracking and hydrogen embrittlement mechanisms through electrochemical and microscopical techniques studies on low environmental impact inhibitors and

biocides as well as ceramic and metal protective coatings Finally there are works on the study of the residual mechanical resistance of corroded infrastructures and on monitoring and non destructive control In this way the book therefore offers a somewhat varied panorama of research trends in the field
